F

MOSCOW EMBASSY SECURITY

- o Recently (May & June) a DCI Security Committee sponsored survey team inspected structural members of the new U.S. Embassy in Moscow now being constructed in Moscow. [REDACTED] 25X1
[REDACTED] anomalies within some of the members that are not called for on the construction drawings.
 - Voids & hollows were observed. These could allow wires to be drawn into place after construction is completed. 25X1
 - Unidentified "devices" appear to be embedded in certain outer perimeter columns located within the line of sight of suspected Soviet listening posts. 25X1
- o A second inspection team will return to Moscow this month (September).
[REDACTED]
- o An appropriate reaction must be determined to either validate the suspicions drawn from the above inspections and/or to inert possible monitoring efforts.
 - Selected people at State should be briefed on our findings to date.
 - After our second survey we will be in a position to offer suggestions for U.S. reaction. 25X1
- o Related issues to be resolved:
 - Some of the structural columns interior to the building cannot yet be inspected at the same level of sensitivity as exterior columns. [REDACTED]
[REDACTED]
 - Possibility exists that structural columns will have to be cut and patched to negate threat. 25X1
 - Effort to remove/negate finds in the building will be delayed until all inspection is completed to avoid Soviet "PNG" action against inspection personnel.
